Like an anticline, the oldest rocks in a dome are found in the center. There are four main types of mountains: volcanic, fold, residual and block. Anticlines and synclines are the most common up-and-down folds that result from compression.

He has undertaken field and laboratory-based research on mountain belts from  
This book is not yet featured on Listopia. A syncline is a U-shape, with the youngest rocks in the center of the fold. Some features of WorldCat will not be available. [Table of Contents](#) [Preface](#); [1](#) to [Wishlist](#) [Add to Wishlist](#). Both are leading authorities in their fields and their excellent understanding of the issues involved comes through in the clearly-structured text ... this book deserves to be widely read.
